

Title: Doctoral Studentship (PhD)

Location: Hartpury University, Gloucestershire.

Funding: £20,780 per annum

Contract Type: Full Time (3 years)

Area of Research: Animal and Agriculture

Cow and calf saliva-gut microbiome as an indicator of health and wellbeing status

The overall aim of this project is to study microbial communities along the gastrointestinal tract of dairy calves and cows, and assess their association with health and production performance. Microbiota in animals plays a vital role in their growth, development and productivity. The project will screen saliva and faecal samples for different bacteria in samples from individual animals and collect farm production, husbandry and environmental records. The interaction between health status plus animal performance measures with bacterial communities will be explored. Hartpury has a 200-cow dairy herd and associated youngstock, which will be used for this project. The objectives of the research are to:

- a) Review the literature on the sampling approaches and bacterial communities associated with dairy animals
- b) Compare the bacterial profile of biological samples (saliva and faeces) from young and adult dairy animals
- c) Assess associations between bacterial profiles and health, management and environmental conditions
- d) Identify key approaches and biomarkers for monitoring individual animal bacterial profiles on farms

For more information and for an initial discussion please contact Dr Lisa Williams
Lisa.Williams2@hartpury.ac.uk .

This is a unique and exciting opportunity to become part of vibrant postgraduate community in an idyllic rural setting, with world leading facilities and undertaking impactful cutting-edge research. The University of the West of England is the awarding body for this degree. Studentships comprise of tuition fees and research project allocation.
